

Press release

TRICERA energy has successfully passed its first surveillance audit for ISO 9001 and ISO 45001

(Dresden, May 7, 2026) TRICERA energy has successfully passed the first surveillance audit of its integrated management system in accordance with ISO 9001 and 45001. The Dresden-based company operates successfully as a general contractor (EPC) and system integrator for large-scale battery storage systems made from second- and first-life battery modules.

ISO 45001 aims to effectively integrate occupational safety and health protection into everyday business operations. These aspects are particularly important in daily work with battery storage systems. In addition, the standard also addresses the awarding of contracts to subcontractors as well as the outsourcing of services to external providers beyond the company's boundaries.

ISO 9001 is the most widely used standard in quality management worldwide. It defines the fundamental requirements for a quality management system that must be met to ensure both customer expectations and the quality requirements for products and services. The certification by ALL-CERT covers the design, project management, construction, commissioning, and maintenance of battery storage systems.

TRICERA energy successfully obtained certification for both standards in 2022, one year after the company was founded. We are pleased to report that we successfully passed a surveillance audit this year. TRICERA energy GmbH fully complies with ISO 45001 and 9001.

We are very proud of this achievement and would like to take this opportunity to thank our employees and partners, with whom we are jointly driving the energy transition forward.

Hintergrund TRICERA energy

To a new era—that is the vision of TRICERA energy GmbH. Based in Freiberg and Dresden, this sustainable company specializes in the development, construction, and operation of large-scale (>5 MWh) battery storage systems, thereby enabling an optimized, demand-responsive, and renewable energy supply. Its core business encompasses five areas of expertise: engineering and consulting, project development, software, system integration, and maintenance and technical operations. With 80 employees—comprising leading experts in the battery industry and boasting many years of experience across various fields—TRICERA energy is a qualified partner when it comes to the energy transition. To date, TRICERA has installed 290 megawatt-hours of capacity and 150 megawatts of power; an additional 210 MWh and 90 MW are already in the works.
